Prof. Dr. Holger B. Deising: The underestimation of fungal toxicity

Prof. Deising in his presentation has shown many brandnew and thus unpublished data, which he will publish in upcoming papers. A summary of his arguments, though, can be found in an article in *The Journal of Plant Diseases and Protection*, Volume 124, Issue 5, pp 413–419 (October 2017): **The unpredictable risk imposed by microbial secondary metabolites: how safe is biological control of plant diseases?** By Holger B. Deising, Iris Gase, and Yasuyuki Kubo, available here:
